COSC 499: Capstone Software Engineering Project

Dr. Bowen Hui
Computer Science
University of British Columbia Okanagan

Remainder of the Semester

- Today is Week 10:
    - Decide on remaining project priorities
    - Plan for 4 weeks' worth of work
    - Finalize which 2 features you each will tackle in the project
- Submit project on April 07th
    - Client will begin reviewing deliverables on April 8th
    - Client judging panel held during class on April 11th

Remaining Features to Consider

- Deployment
- UI/more serious fixes from Peer Testing #2
- Ideas from other teams you got from Peer Testing #2
- Nice-to-have features to "round off" use cases
- Get your project to a point where you can showcase it during interviews
  - Live demo on a production site
  - Live demo on your local
  - Live demo without it breaking

Remaining Client Feedback

- Final project feedback
  - Worth 3%
  - Similar to the Design milestone feedback
  - Client gives overall ranking and progress evaluation
  - Both aspects determine the grade out of 3%
- Client/External validation
  - Creates a small competition environment
  - Will pass this portion if no issue with overall progress

Remaining Project Report

- Each student submits an individual project report
  - Worth 25%
  - You explain the system:
    - How to install/run it?
    - How does it work?
  - You explain the features implemented in the system
  - You identify which features *you* did; no overlaps with other members
- Each student submits an individual video
  - Counted as part of the project report
  - Explain the system and features

Rules on Project Report/Video

- Treat as open-book exam
    - Can study by learning your system now
    - You can talk and discuss among your team if needed
    - The report must be written on your own
    - All diagrams must be created by yourself
    - No copying of information allowed → otherwise flag as plagiarism
    - Diagram(s) cannot be identical → otherwise flag as plagiarism
- Follow report template on course website
