

Assignment #2

Due: Thursday, January 30, 4:00 pm

You are being evaluated on the presentation, as well as the correctness, of your answers. Try to answer questions in a clear, direct, and efficient way. Sloppy or incorrect use of technical terms will lower your mark.

1. Describe and sketch the following sets of complex numbers.

(a) The image of $\operatorname{Re}(s) \geq 1$ under the mapping $f(z) = iz + i$.

(b) $\{z \in \mathbb{C} \mid \operatorname{Re}(z^2) > 0\}$

2. Use the formal definition of limits to show that $\lim_{z \rightarrow i} \frac{z^2 + 1}{z - i} = 2i$.

3. Use the definition of the derivative to show that the function $f(z) = \operatorname{Im}(z)$ is nowhere analytic.

4. (§2.2, #18.) Let $f(z) = u(x, y) + iv(x, y)$, $z_0 = x_0 + iy_0$, and $w_0 = u_0 + iv_0$. Use the formal definition of limits to prove that

$$\lim_{z \rightarrow z_0} f(z) = w_0$$

if, and only if,

$$\lim_{\substack{x \rightarrow x_0 \\ y \rightarrow y_0}} u(x, y) = u_0 \quad \text{and} \quad \lim_{\substack{x \rightarrow x_0 \\ y \rightarrow y_0}} v(x, y) = v_0.$$

Hint: Use the fact that $|z| = \sqrt{x^2 + y^2} \geq \sqrt{x^2} = |x| = |\operatorname{Re}(z)|$.

5. Use the Cauchy-Riemann equations to show that the function $f(z) = x^2 + iy^2$ is nowhere analytic. Where is f differentiable?
